-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2837

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kovach et al in view of Herndon et al as cited by applicant. Kovach et al discloses control system for motor comprising power supply, controller attached to power supply and control circuit connected to power supply and including four high current non mechanical electronic switches where closing one of first two of switches and one of second two of switches causes current to flow through motor winding in a first direction while closing second of first two electronic switches and second of second two of electronic switches causes current to flow in a second direction opposite of first direction, see fig 13, 18 and col 14 lines 16-54. Kovach et al lacks disclosing winch and spool and overload detection. Herndon et al discloses spool and winch and overload detection see col 3 lines 15-20 and col 4 lines 15-65. It would have been obvious to one of ordinary skill in the art to utilize the winch protection of Herndon et al with the control system of Kovach et al for load limiting control.
